

Encyclopaedia and development climate resilient building suiting to different climatic regions of India under Development of durable and energy efficient climate resilient building for India (HCP-59)

PI: Dr Leena Chaurasia

Abstract: To construct any building, the most important thing is to have the building material. Different types of building materials are found in different places in India. Some of which are familiar and some are not. To address the issue a plan has made to make a list of all the building materials available in all states of India. First of all, the districts of Uttarakhand and Haryana have covered then discover the availability of both natural and Processed building materials in each of 13 district of Uttarakhand and 22 district in Haryana. All the materials are listed and located in a GPS map. The regional industries have explored and addressed the building material produce there. To make it possible for everyone to readily locate the location of any industry or supplies, a connection to a GPS map has been mad.
